Agenda

The Webinar will be about 1 hour, 45 minutes for presentation and 15 minutes for Q&A.

It will be about:

- Fertilizer plants depend on steam systems, but condensate return issues can cause energy losses and unstable operation.*
- This presentation highlights a real case where a condensate recovery solution was implemented in a granulation air preheater using a mechanical pump system, restoring stable operation without stopping production.*
- It also stresses the importance of steam trap management to maintain efficiency and reliability.*
